

Wi-Fi & 5G—Safe? **NOT!**

5G is the next-generation mobile phone carrier technology, operating at higher frequencies to deliver faster downloads and reduced latency.

Industry claims that Wi-Fi and 5G are safe but phones and wireless devices emit **microwave radiation**, classified by the WHO as a Class 2B 'Possible Human Carcinogen'. Official safety levels are set at least a **million times too high** and **thousands of scientific studies** have found **many adverse health effects**, yet **no 5G safety testing has been done!**

Every 5G provider will install 'small cell' transmitters every 100–300m along every street, **including yours**—there will be **no escape** from the **electro-smog!** Higher-frequency 5G 'millimetre waves' are blocked by buildings & trees (especially when in full leaf and wet), so hundreds of thousands of urban trees nationwide would have to be felled.

Proven health problems of microwave radiation

Brain tumours & other cancers, insomnia, headaches, tinnitus, nosebleeds, neuro-developmental disorders, cognitive impairment, fertility problems such as impaired sperm quality/motility & ovum abnormalities, DNA damage, oxidative tissue damage, cell metabolism disruption, blood cell damage, cardiac stress & arrhythmia, skin complaints, eye lens opacity, immune system suppression, depressed cell growth, damage/death to plants & animals, especially insects.

Babies and children are especially vulnerable!

“Putting in tens of millions of 5G antennae without a single biological test of safety has got to be about the stupidest idea anyone has had in the history of the world.”

- Dr Martin L Pall, Professor Emeritus of Biochemistry and Basic Medical Sciences,
Washington State University

What Can We Do?

- Sign petitions demanding a 5G moratorium & safety research
- Complain to PHE & Ofcom about the lack of 5G safety research
- Educate your GP, teachers, local councillors, MP & MEPs
- Phone into local or national radio programmes
- Tell your friends, relatives, neighbours & work colleagues
- Post about it in your social media networks
- Write to newspapers
- Switch Wi-Fi off & set mobile devices to flight mode at night
- Limit mobile phone usage, **especially that of your children**
- Don't keep your phone close to your body (e.g. in a pocket)
- Don't hold a phone against your head, use an **air-tube** headset
- Use a wired Ethernet network connection whenever possible
- Use wired keyboards, mice and telephone handsets
- Print more of these leaflets and distribute them locally

qui tacet consentire videtur - “who is silent is seen to consent”
